

Network 24x7 Innovation Secure

While the security products are vital to secure your network and data but these are merely tools. Most SME's do not have the right skill set to ensure that the product implemented is configured and setup to the best of the products abilities and industry practices. We at Innovation Networks offer you a unique consultancy service offering called Innovation Secure to ensure your Next-Gen Firewall / UTM devices are Manually Audited (250+ checks), bespoke reported and remediated by highly skilled network security experts This is a part of basic network security hygiene exercise for any size and shape of Organization.

Remediation Consultancy

Our team will help the customer to understand the impact of each suggested configuration change and prioritize them as per compliance requirements.

- Understand, discuss, and prioritize configuration changes.
- Develop an Implementation Schedule.
- Changes are implemented on predefined schedule to avoid any impact on your current network.

Secure your company's data and network.

You may have a Next-Gen Firewall/UTM as your first line of defence against the cyber threats. But does it have the required immunity to fight against evolving complex threats to your business? A simple check can surprise you with its outcomes. Research from Gartner suggests that, by 2020, 99% of firewall breaches will be caused by simple firewall misconfigurations, not flaws. Not just misconfiguration which leads to major security problems, unpatched or poorly

maintained security products are also a major threat to the organization. Over a period of time, the complexity of your firewall may have increased due to an exponential growth of applications in your network. Today, a single firewall in your organization may be configured with hundreds of objects and rules to define web & application access policies, network access and protection policies, allowed services, routing rules, and more.

Comprehensive Audit Scedule

A designed comprehensive auditing process to ensure your security device maintains good security posture and is fully compliant with industry best practices.

- (i) Device Access Policies
- Password Management
- (i) Firewall Rules
- () Content Filters
- (Anti-Malware / Anti-Spam Policies
- (i) Intrusion Prevention Rules
- Anti-Spoofing Protection
- Web Application Firewall (WAF)
- (Logging and Reporting

On successful completion of the auditing process, our SOC team prepare a detailed report to make the customer aware of key findings, the security posture of the device and remediation recommendations.
